

Diacom Press Release

Amherst, NH, Friday, August 8, 2025

RPP LLC acquired by Diacom Corporation

Diacom Corporation has expanded its diaphragm engineering capabilities through the acquisition of RPP LLC, a U.S. manufacturer known for high-cycle PTFE-bonded diaphragms and advanced industrial sealing solutions.

By integrating RPP's materials expertise, tooling assets, and diaphragm technologies, Diacom now offers a broader range of fabric-reinforced, PTFE-bonded, and multi-layer diaphragm assemblies for aerospace, medical, automotive, and industrial applications. RPP is a designer and manufacturer of molded diaphragm seals and other custom engineered seals since 1963. RPP serves a variety of markets including oil & gas, food & drug, medical, industrial and water controls. RPP has a strong reputation for quality and service – capabilities that closely align with DiaCom's own mission and manufacturing expertise. This next chapter, joining the Diacom family, strengthens that legacy and opens the door to even greater possibilities.

RPP capabilities, equipment and plant will complement Diacom's existing two facilities in Amherst, NH. The additional capacity and extensive diaphragm design and manufacturing knowledge between the two companies solidifies Diacom's position as a global leader in the diaphragm industry. The combined companies will have almost 200 presses and over 80,000 square feet of manufacturing space. With over four decades of experience and a global presence, Diacom is well positioned to grow the RPP business while maintaining the same standards of excellence our customers have come to expect. We are very excited about the future of Diacom. This acquisition marks an exciting new chapter for Diacom. We have built a legacy of quality, customer service, and engineering excellence for our customers. This acquisition will further enhance this legacy.
